# Full Stack Project

Class 7(Starting the Backend- MVC architecture)
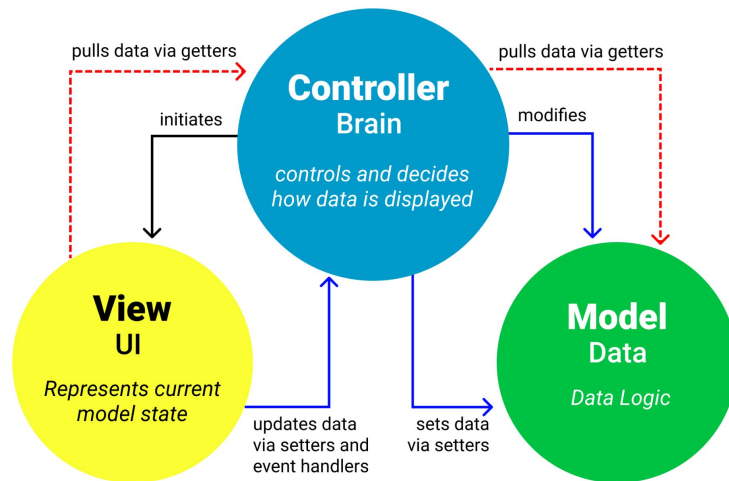

# Topics covered in this class

1.  Start creating the server of the DevSpace and connect to the database.

2.  Implement routing.

3.  Understand MVC Architecture.

4.  Implement your first model and controller.

5.  Store a user in the db using postman.

# MVC architecture

MVC - **Model View Controller**

Model View Controller is a software architectural pattern that involves the separation of the application logic into three interconnected elements the Model, View, and Controller.

## MVC Architecture Pattern

# Resources

1. Routing - https://expressjs.com/en/guide/routing.html

2. MVC Pattern - https://dev.to/eaetukudo/understanding-mvc-pattern-in-nodejs-2bdn

3. MongoDB queries- https://www.w3schools.com/nodejs/nodejs_mongodb_insert.asp

4. Express- json() & urlencoded() - https://expressjs.com/en/api.html#express.json
